What's your style?

Moda comes in thirteen colors, allowing you to choose the look that suits your unique style.

Open up to brilliant sound, in total style and comfort.

Styled for Indigo™ and Element™

All the features. A fraction of the size.

Are you looking for a hearing instrument that allows for brilliant sounding conversations and is also discreet and stylish? Moda™ is the ideal choice. Moda is a very small, comfortable hearing instrument that fits discreetly behind your ear (This style is called BTE, which stands for behind-the-ear.).

With Moda, we've trimmed down the size of a traditional BTE instrument, but kept the advanced digital technology that ensures a simple, crystal clear, enjoyable listening experience with a comfortable, open fit.

Great little conversation piece.

If you have a high frequency hearing loss, you may have been missing out on certain sounds such as children's voices or parts of conversations. Moda makes it possible for you to enjoy the high frequency sounds of life again.

Total performance.

Many of today's smaller BTE hearing instruments ask you to give up features and performance in the name of style. With Moda styled for Indigo™ and Element™, you enjoy all the advantages of a regular-sized hearing instrument but at a fraction of the size.

Moda's advanced features work together to improve your ability to hear conversations and ease your listening comfort by:

- eliminating sudden uncomfortable sounds, such as a door slamming, without affecting normal conversation
- identifying and reducing background noise
- tracking and suppressing noises, even if they are moving around your conversation, like a car driving by

Comfortable to wear.

Moda is very lightweight and slender, for a comfortable, unnoticeable fit. Moda connects to your ear with virtually invisible slim tubes, which are cosmetically appealing and leaves your ear more open so you can hear more naturally, even the sound of your own voice.

Premium features. Brilliant sound.

Your hearing health care professional will help you determine which brilliant sounding Moda is best suited to your personal hearing loss, lifestyle and budget.

Indigo™ delivers exceptional true to life sound in a sophisticated, easy to use, automatic hearing instrument that adapts precisely to your diverse listening environment.

Element™ 16, **Element™ 8** and **Element™ 4** each have different levels of technology that allow you and your hearing healthcare professional to personalize your hearing instrument for the best listening experience. The brilliant sound quality lets you hear more of what you want and less of what you don't.
